Electro-Tech Machining obtains ISO-9000:2000 certification

Long Beach, CA – Electro-Tech Machining has announced the successful completion of an ISO 9000:2000 audit and certification of the company's Long Beach operations. The ISO (International Standards Organization) certification is the recognized standard that validates consistently high quality manufacturing practices and is of particular value to products seeking overseas markets.

Upon receiving the new certification, Kevin McMahon, Vice President of Electro-Tech Machining, said, "We believe our registration to the new standard demonstrates our commitment to quality products and services. While the previous versions of our quality systems were useful for documenting quality data, it did not require continuous improvement efforts. Any quality system must do this to be truly effective."
